Bulk Price Update

Products · https://spos.pk/docs/bulk-price-update/

A bulk price update changes the selling or purchase price of many products in one go. It saves hours of manual work when a supplier raises prices, when you run a promotion, or when you need to apply the same percentage increase across a whole category.

Bulk price update

1. Go to **Products** from the Smart POS main menu and filter the products whose prices you want to change, for example by category or brand.
2. Select the products to update, then choose the bulk price update option and decide whether to change the price by a fixed amount or a percentage.
3. Enter the new price or the percentage change, and choose whether it applies to the selling price, the purchase price, or both.
4. Review the list of affected products and the new prices before you confirm, because the change applies to every selected product.
5. Save the update, then check a few products on the POS screen to confirm the new prices are showing correctly.

Tip: Test a price update on a small group first, and always check the new prices at the till before a busy trading day.
