Discounts by Brand, Category, Location

POS & Sales · https://spos.pk/docs/discounts-by-brand-category-location/

Instead of discounting one product at a time, Smart POS lets you apply a discount to a whole brand, category or location. This is ideal for a brand promotion, a seasonal clearance, or a special offer that runs in only one of your branches.

Discounts by brand, category, location

1. Go to the discount settings in Smart POS and create a new discount, giving it a clear name such as a brand or clearance offer.
2. Choose what the discount applies to: a brand, a product category, a location, or a combination of these.
3. Set the discount amount or percentage, and the dates the offer should run, so it starts and stops automatically.
4. Save the discount, then make a test sale with a product from that brand or category to confirm the discount is applied.
5. Check the invoice to confirm the discount shows correctly, and turn the discount off when the promotion ends.

Tip: Give every discount a clear start and end date, so an old promotion never stays active by mistake.
