Display product unit price in POS Product suggestion

POS & Sales · https://spos.pk/docs/display-product-unit-price-in-pos-product-suggestion/

When a cashier types a product name on the POS screen, Smart POS suggests matching products. Showing the unit price in that suggestion list helps the cashier pick the right item and the right price at a glance, without opening each product to check.

Display product unit price in POS product suggestion

1. Go to the POS settings in Smart POS and open the settings for the POS screen.
2. Find the option to show the product unit price in product suggestions and turn it on.
3. Save the settings, then open the POS screen and start typing a product name in the search box.
4. Check that each suggested product now shows its unit price alongside its name.
5. Select a product from the suggestions and confirm the price added to the sale matches the price shown.

Tip: Keep product names short and clear, so the name and price both fit neatly in the suggestion list at the till.
