# Displaying QR code in invoice

POS & Sales · https://spos.pk/docs/displaying-qr-code-in-invoice/

A QR code on an invoice lets a customer scan it with their phone to pay online, view the invoice, or check the sale details. It is a quick, paper-friendly way to connect a printed receipt to a digital payment or record.

## Displaying QR code in invoice

1. Go to the invoice layout settings in Smart POS and open the layout used for your printed invoices.
2. Find the QR code option and turn it on, then choose what the QR code should contain, such as the invoice link or payment details.
3. Save the invoice layout, then create a test sale and print or preview the invoice to see the QR code.
4. Scan the QR code with a phone to confirm it opens the right invoice or payment page.
5. If the code is too small to scan easily, increase its size in the invoice layout settings and test it again.

Tip: Always test the QR code with a real phone before you use the layout at the till, so customers are never given a code that does not scan.
