How to add Product Units?

Products · https://spos.pk/docs/how-to-add-product-units/

Units let you buy in one measure and sell in another — cartons, pieces, kg, litres and packs.

How to add product units

1. Go to Products and open the units list.
2. Add a unit for each measure you use — for example Piece, Kg, Litre, Dozen and Carton.
3. Set the base unit for each product — the unit you count stock in.
4. Add the units you sell in, with the conversion to the base unit where it applies.
5. Choose the selling unit at the counter; Smart POS converts the stock automatically.

Tip: Count stock in the base unit only, and let the selling units convert — it keeps stock accurate.
