How to add Variations?

Products · https://spos.pk/docs/how-to-add-variations/

Variations let one product cover many sizes, colours, flavours or pack sizes — with its own price and stock for each.

How to add variations

1. Open the product and change its type to Variable.
2. Add a variation attribute — for example Size, Colour or Flavour — with all its values.
3. Generate the combinations Smart POS offers, or add them one by one.
4. Set a price, SKU and opening stock for each variation.
5. Sell the variation at the counter; stock is tracked separately for every size and colour.

Tip: Add the attribute values before you start selling — renaming a variation later means re-checking every sale.
