How to check product stock history?

Products · https://spos.pk/docs/how-to-check-product-stock-history/

Product stock history shows every change to a product's quantity: what was purchased, sold, transferred or adjusted, and when. Checking it is the quickest way to find out why your current stock does not match what you expected.

How to check product stock history

1. Go to **Products** from the Smart POS main menu and find the product you want to check.
2. Open the product and look for its stock history or stock details, which list every stock movement for that product.
3. Review each entry in date order, noting purchases that added stock and sales that reduced it.
4. Check for stock adjustments, transfers and returns, which also change the quantity and are shown in the history.
5. Compare the running total in the history with the current stock on hand to confirm the figures agree, and investigate any entry that does not.

Tip: If a quantity looks wrong, check the history first before changing the stock, so you can see exactly which transaction caused the difference.
