How to import products to Smart POS?

Products · https://spos.pk/docs/how-to-import-products-to-smart-pos/

Import thousands of products, categories and brands in one go — no need to add them one by one.

How to import products

1. Prepare a spreadsheet with one row per product — name, SKU or barcode, selling price, purchase price, category and brand.
2. Open **Products** in Smart POS and choose **Import**.
3. Upload your file and match each column to the matching Smart POS field.
4. Run the import and check the summary — fix any rows it flags and import them again.
5. Open a few products to confirm prices, categories and barcodes came through correctly.

Tip: import a small test file of 10 products first. Once the columns match cleanly, import the full range.
