Increasing Recent Transaction List Limit

POS & Sales · https://spos.pk/docs/increasing-recent-transaction-list-limit/

The recent transactions list on the POS screen shows the sales made most recently at that till, so staff can quickly find a sale to reprint, return or check. If the list is too short, older sales disappear from view quickly; increasing its limit shows more of the day's sales at a glance.

Increasing recent transaction list limit

1. Go to the POS settings in Smart POS and open the settings for the POS screen.
2. Find the setting for the recent transactions list limit, which controls how many recent sales are shown.
3. Increase the number to a value that suits your shop, for example showing more transactions during a busy day.
4. Save the settings, then open the POS screen and check that the recent transactions list now shows more sales.
5. If the list feels too long or slow to load, reduce the limit again until it is quick to use.

Tip: Keep the limit high enough to cover a busy hour of sales, but not so high that the POS screen becomes slow to open.
