Invoice External URL

POS & Sales · https://spos.pk/docs/invoice-external-url/

An invoice external URL is a web link for an invoice that you can share with a customer, for example by SMS or WhatsApp. The customer opens the link on their phone to view or download their invoice, without you having to print or email a paper copy.

Invoice external URL

1. Complete a sale at the POS screen in Smart POS and save the invoice as normal.
2. Open the sale from the sales list and find the invoice link or external URL option for that invoice.
3. Copy the invoice URL, and check that it opens the correct invoice when you paste it into a browser.
4. Share the link with the customer by SMS, WhatsApp or email, so they can view or download their invoice.
5. If the link stops working, open the sale again and copy a fresh link before sharing it.

Tip: Send the invoice link as soon as the sale is complete, while the customer is still at the till, so they can confirm it opens correctly.
