Printing Labels

Products · https://spos.pk/docs/printing-labels/

Printed labels make your shop look tidy and make selling faster: each product gets a label with its name, price and barcode, so staff can scan it at the till instead of typing prices by hand. Smart POS can print labels for one product or for many products at once.

Printing labels

1. Go to **Products** from the Smart POS main menu and select the products you want labels for.
2. Choose the print labels option and pick the label size and layout that matches the label sheets or rolls your printer uses.
3. Check how many labels to print for each product, and whether the label should show the product name, price and barcode.
4. Preview the labels on screen to confirm the text fits and the barcodes are clear, then send them to your label or regular printer.
5. Stick the printed labels on the products or shelves, and test one by scanning it at the POS screen to confirm it opens the right product.

Tip: Print a single test label first and scan it at the till, so you can fix the layout before printing a full sheet.
