Stock Transfer

Stock Transfer · https://spos.pk/docs/stock-transfer/

Move stock between branches, godowns and warehouses — and keep every location's stock accurate.

How to transfer stock

1. Open **Stock Transfer** and choose **Add Transfer**.
2. Choose the sending branch or warehouse and the receiving branch or warehouse.
3. Add the products and quantities to move — scan barcodes to add items fast.
4. Save the transfer. Stock leaves the sending location immediately and is marked in transit.
5. At the receiving branch, open the transfer and confirm receipt — stock is added there.

Tip: check the in-transit list before ordering more stock — a transfer that is already on its way often covers the shortage.
