Using Smart POS for Selling of Services

POS & Sales · https://spos.pk/docs/using-smart-pos-for-selling-of-services/

Smart POS is not only for selling physical products. You can also sell services, such as repairs, tailoring, salon treatments or delivery charges, by setting them up as service products and adding them to a sale at the till in the same way as any other item.

Using Smart POS for selling of services

1. Go to **Products** from the Smart POS main menu and add a new product for each service you offer, with its name and price.
2. Mark the product as a service, so Smart POS knows it has no stock to track and will not reduce any quantity when it is sold.
3. Set the selling price for the service, and add a description if customers need to know what is included.
4. At the POS screen, select the service just like a product, add it to the sale and complete the payment as normal.
5. Check the sales report afterwards to confirm service sales are recorded separately from product sales, if you need that breakdown.

Tip: Keep service prices up to date on the product record, so the till always charges the current rate and staff never have to remember prices.
